

Mobile Banking Feature Sheet

Omni Channel Platform

Whether you're on your phone, tablet or desktop you can enjoy all the functionalities of our software on the device of your choice. Our software is optimized for a variety of operating systems, which ensures a seamless experience when moving from platform to platform.

All channels are fully integrated which means one administrative system controls all of the channels. A single user ID and password for all platforms ensures easy access for users as well as a consistent user experience.

Security

Security is a primary concern with Mobilearth. The following are some security features within the Mobilearth system:

- Digital certificates that ensure end to end encryption
- Multi-Factor Authentication that is customizable for logins
- Data encryption measures that exceeds internet protocol for all data transmissions
- Text on a per user basis can be disabled if a mobile device is lost or stolen
- The amount of information that can be retrieved by text is limited
- Time limits for inactivity are set for both mobile and web
- Financial institutions can set transaction posting limits for transfers, bill and peer payments
- Security alerts are sent when password is changed or a new device is logged in

Integration to the Core

Integration to the core banking system is done through a variety of methods as required. Multiple interfaces allow the end user to pay bills, view credit card information or look at account balances and history without the need to sign into multiple sites.

Channels

Our mobile and online platforms are accessible via a variety of channels, and offers a consistent experience to the end user. Here are some of the channels we support:

- Text (SMS)
- Mobile apps for Android and Apple phones
- Web Browser (Responsive Design)
